

Not Your Typical Tech Job

WHY SURESWIFT?

Our dev teams get a lot done — and learn a lot while they do it. Although we buy SaaS businesses that are already great and grow them, innovation doesn't stop when we buy them.

TALK > TICKETS

As a developer, you'll work hand-in-hand with our product leaders to deliver awesome SaaS products, and you'll always have a voice in the evolution and growth of our products and what you're working on.

DON'T HIDE YOUR HUSTLE

We love learners, doers, and entrepreneurs. As long as you're clear with your team about your availability and you're hitting your work goals with us, we believe your time and mental space are just that — yours — so side projects are welcome.

YOUR NEXT JOB IS HERE

With more than 25 products in our portfolio and a goal of doubling that number in the next two years, we have a lot of career opportunities for developers in both technical and management paths.

WORK ANYWHERE, ANYTIME

We've been remote-first and global since the start and we believe that work should fit into your life, not the other way around. Aside from regular team meetings, how, where, and when you get your work done is totally up to you.

“Our remote-first culture allows me to have the perfect work-life balance.”

Erika Green,
Product Engineering
Manager

Now hiring developers in all tech stacks:

Ruby on Rails, Kotlin & Java, PHP,
React Native and JavaScript,
Python and React
